for face & body.*

WHAT IS ULTRA LIGHT?

ULTRALIGHT Features and Main Components

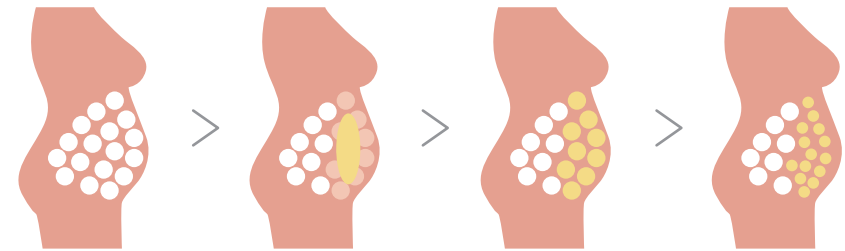

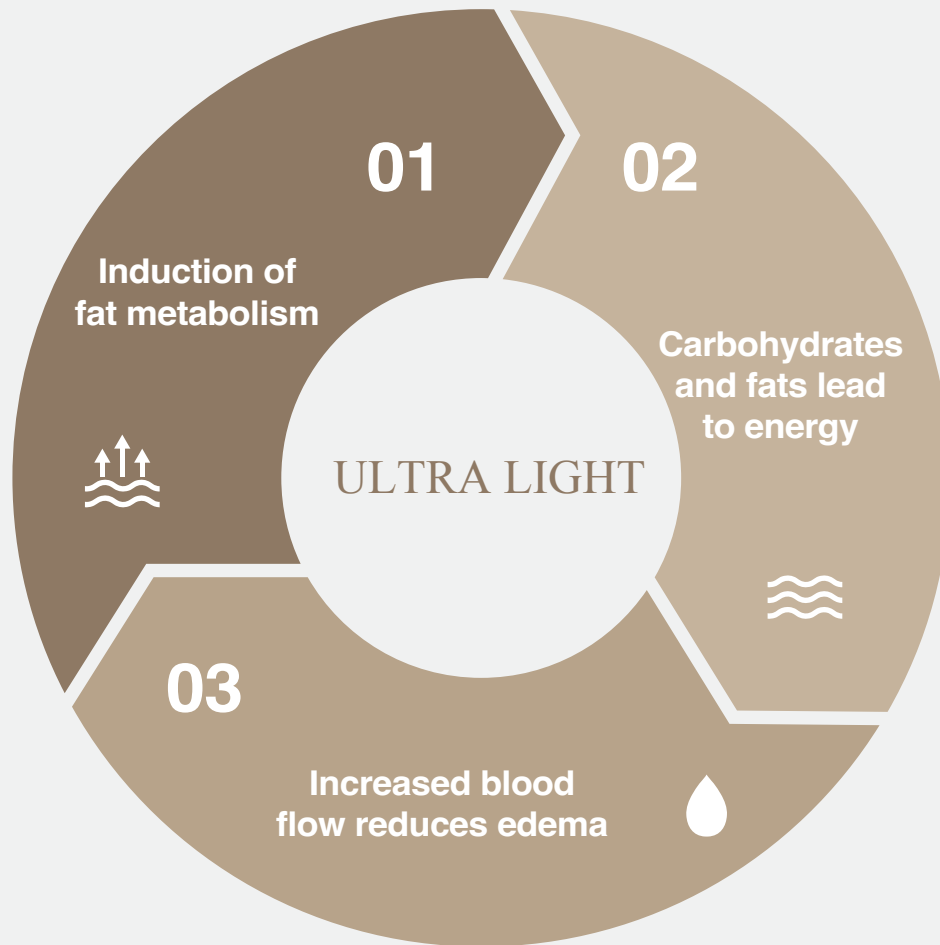

Features

- Ultralight is a new injectable that is very effective at reducing the appearance and profile of moderate to severe fat below the chin (submental fat).
- When injected into the fat underneath the chin, ultralight causes the destruction of fat cells. Once destroyed, the cells can no longer store or accumulate fat.
- Formation of flawless facial lines and beautiful contours.
- Elimination of excess fat and controlled formation of new fat cells.
- It can remove cheek fat, buccal fat, subaural sagging fat, and submental fat. It also corrects overdone fat graft.

Main Components

NPToc
L-carnitine
Lecithin
Juglans Regia
Fucus Vesiculosus
Aesculus Hippocastanum
Tyrosine
Disodium Adenosine phosphate
Pulsatilla Extract
Sodium
Chloride
Riboflavin

How treatment works?

/ Following injection of Ultra Light, the adipocyte cell wall is destroyed, resulting in the cascade of inflammatory necrosis of cell and reduction in the size of adipocytes.

/ Inflammatory cascade also results in fibroblast migration and stimulation, resulting in buildup of more collagen.

Active Ingredient

Lecithin	Stimulation of lipase activity. lecithin possess beneficial properties in reducing cholesterol levels and controlling or preventing atherosclerosis.
Juglans Regia	Increased blood flow to skin for enhanced follicular cleansing and eliminating of toxic wastes by high concentration of linolenic acid, arginine, and vitamin E.
Fucus Vesiculosus	Rejuvenated, slim, and perfectly flawless leg line by cellulite-removing effective of bladderwrack extract.
Aesculus Hippocastanum	As it enhances the function of the capillaries, increases the tension of the venous blood vessel walls and increases the flow of venous blood, it removes the congestion of the peripheral blood flow. It improves various blood circulation disorders, because it takes actions to stimulate blood, increase perfusion and increase blood flow of peripheral blood vessel.

Active Ingredient

Tyrosine	It is involved in the biosynthesis of dopamine and epinephrine, it promotes lipid metabolism and burns body fats.
Disodium Adenosine phosphate	As it is a high energy phosphate binder it gives the activity of the muscle and promotes cell function as an energy source of cells.
Pulsatilla Extract	Clean and younger skin with increased elasticity by clinically proven effect of rich and naturally occurring saponin from Pulsatilla roots.
Sodium Chloride	Cation generating element in extracellular fluid that promotes vasodilation increased blood flow, angiogenesis, and enhanced myocardial metabolism.
Riboflavin	Helping anti-ageing, cell regeneration or energy metabolism through antioxidant function Strengthening skin, hair and nails, promoting growth, and suppressing active oxygen to prevent ageing.

Protocol

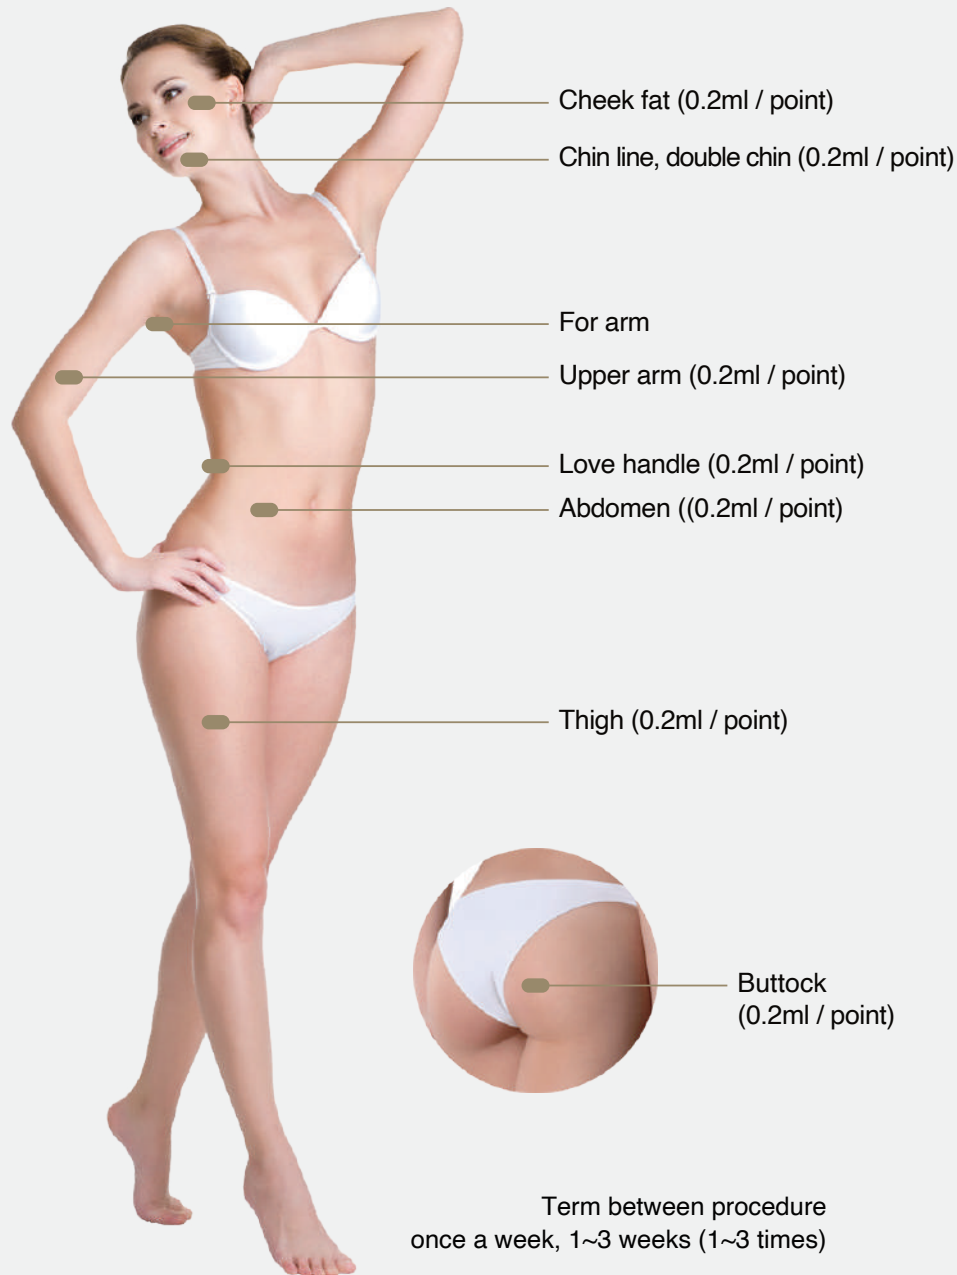

Ultra Light protocol of use

1. Usage per each spot is 0.1cc, Do not exceed 2cc at once.
2. Shake the ampoule for a few seconds until colour turn green for a temporary emulsion.
3. Recommended to use along the chin line.
4. After using, massage well on the spot.
5. In the case of using at the body, the usage per part is the same.
6. In case of the body, there are various kinds of fat and size, so its efficacies can't be sure.
7. Caused by overdosage on the cheek, the top side of nose, etc., the dimple symptom may be occursymptomrred, so use carefully according to the skill of the operator
8. In some cases, allergy reactions may appear to individual differences after use. In this case, prescribe antibiotics (such as Dexa).
